Data Acquisition System

DAQ-9600

Expand Your Measuring Tentacles

The DAQ-9600 data acquisition system has six high-quality modules and a built-in 6 1/2 digit multimeter to provide you with an efficient and accurate data acquisition.

The system measures and converts 14 different input signals: Temperature with thermocouples, RTDs and thermistors; DC/AC voltage; 2-wire and 4-wire resistance; frequency and period; DC/AC current and capacitance; direct strain and bridge strain.

Your data acquisition is controlled by logging and observing results in a variety of display options for easier analysis. A free DAQ software assists you in controlling measurement channels for your specific test configurations from multiple data acquisition units.

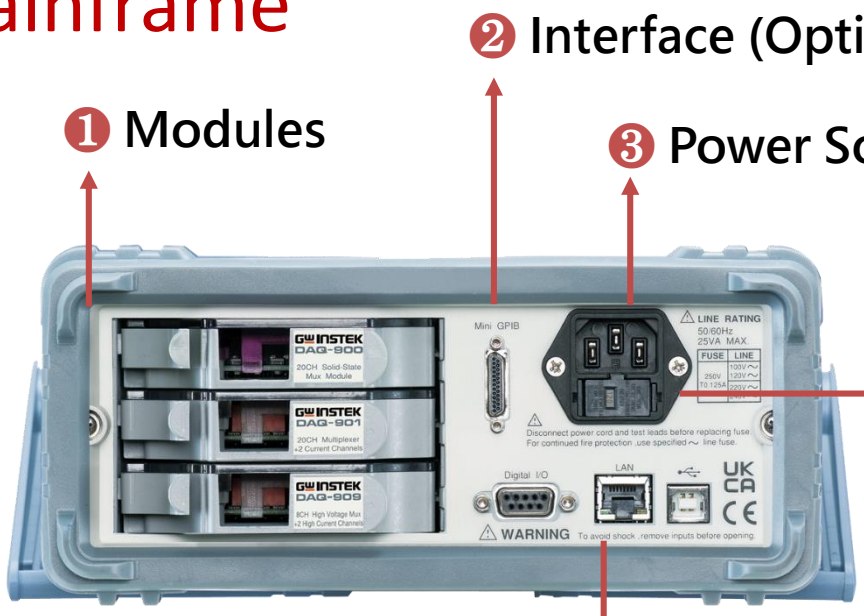
Mainframe

Digital IO Standard | LAN Standard | USB Standard | GPIB Option

6 ½ digits Accuracy

3-slot Mainframe



Features (Mainframe)

※ Large 4.3" TFT color display
※ 3-slot mainframe with built-in 6 ½ digit DMM
※ Basic 0.0035% DCV accuracy
※ 6 selectable switch modules
※ Up to DC 600 V / AC 400 V Voltage Measurement (DAQ-909 module)
※ Up to 450 channels/s scan rate
※ Up to 100 kilo points internal memory
※ Measures and converts 14 different input signals:
Temperature with thermocouple, RTDs and thermistor; dc/ac volts; 2- and 4-wire resistance; frequency and period; dc/ac current and capacitance; direct and bridge strain
※ Commands compatible with the DAQ970A
※ USB storage supports copy/log data in standalone operation
※ Interfaces: Digit I/O, LAN, USB host/device and mini GPIB(optional)
※ Free PC software DAQ-Data logger, allows easy configuration and control of tests

Features (Modules)

DAQ-900 **20-Channel Universal Multiplexer (Solid State Relay)**
※ Scanning speed up to 450 channels per second
※ 2-wire and 4-wire scanning
※ Built-in temperature cold junction reference
※ 120 V switching

DAQ-901 **20+2 Channels Universal Multiplexer (Armature Relay)**
※ The scanning speed can reach 80 channels per second
※ 2-wire and 4-wire scanning
※ Built-in temperature cold junction reference
※ 300 V switching
※ The extra 2 channels can directly measure the current (1 A/per channel)

DAQ-903 **40-Channel Single-Ended Multiplexer**
※ The scanning speed can reach 80 channels per second
※ Single-wire switching is suitable for common-low applications

DAQ-904 **4 x 8 2-Wire Matrix**
※ The switching speed 3ms
※ 32 2-wire intersections
※ 300 V, 1 A switching
※ Up to 96 crosspoints (3 slots)

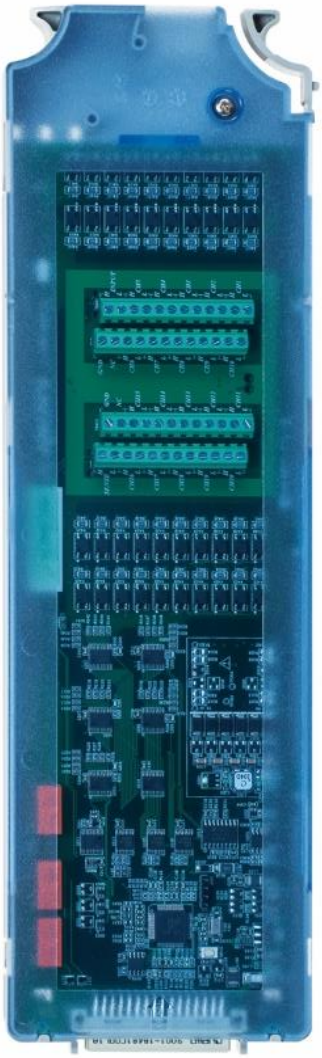
NEW **DAQ-908** **20-Channel Actuator/General Purpose Switch**
※ SPDT (Form C) latching relays
※ 300 V, current 1 A actuation and control

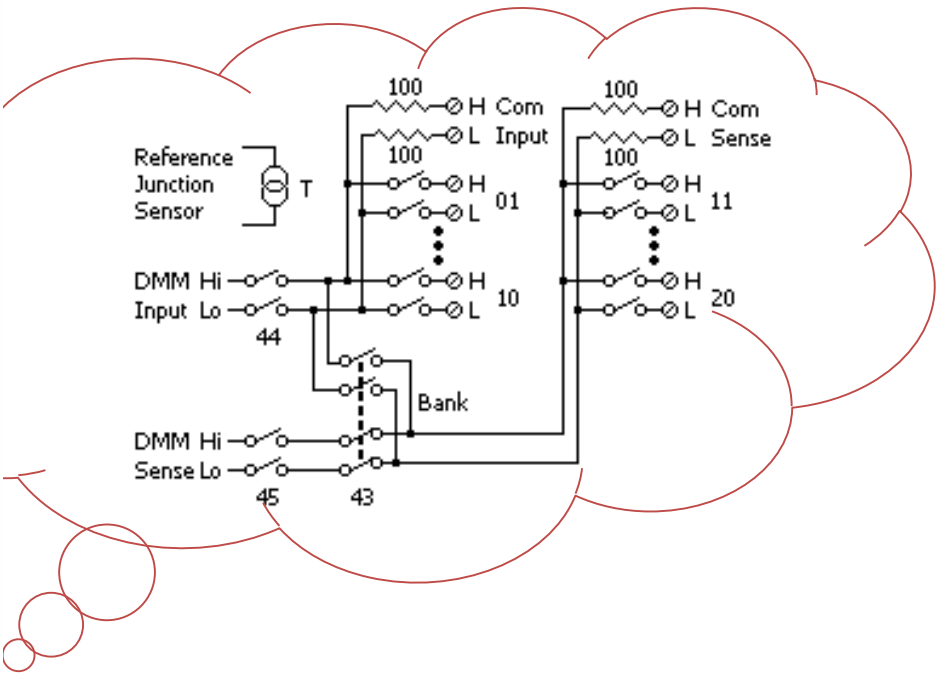
DAQ-909 **8+2 Channels High Voltage High Current Multiplexer**
※ The switching speed 3ms
※ DC voltage 600 V, current 2 A
※ 2-wire and 4-wire scanning
※ Additional 2 channels can directly measure current (2 A/per channel)

DAQ-900

20-Channel Universal Multiplexer (Solid State Relay)

※ Scanning speed up to 450 channels per second
※ 2-wire and 4-wire scanning
※ Built-in temperature cold junction reference
※ 120 V switching



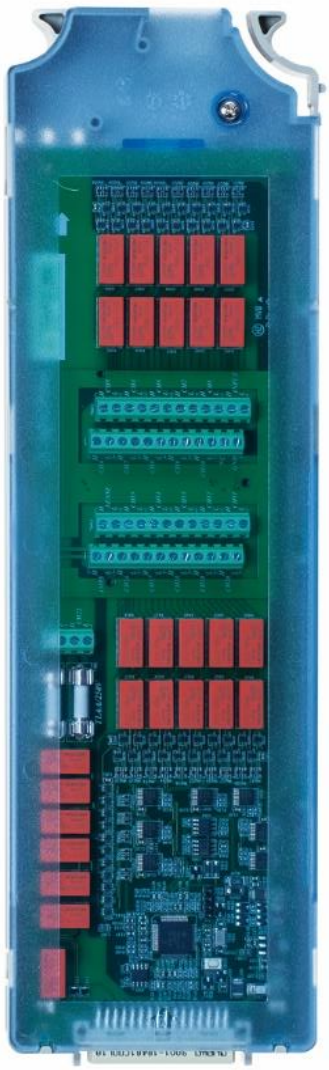


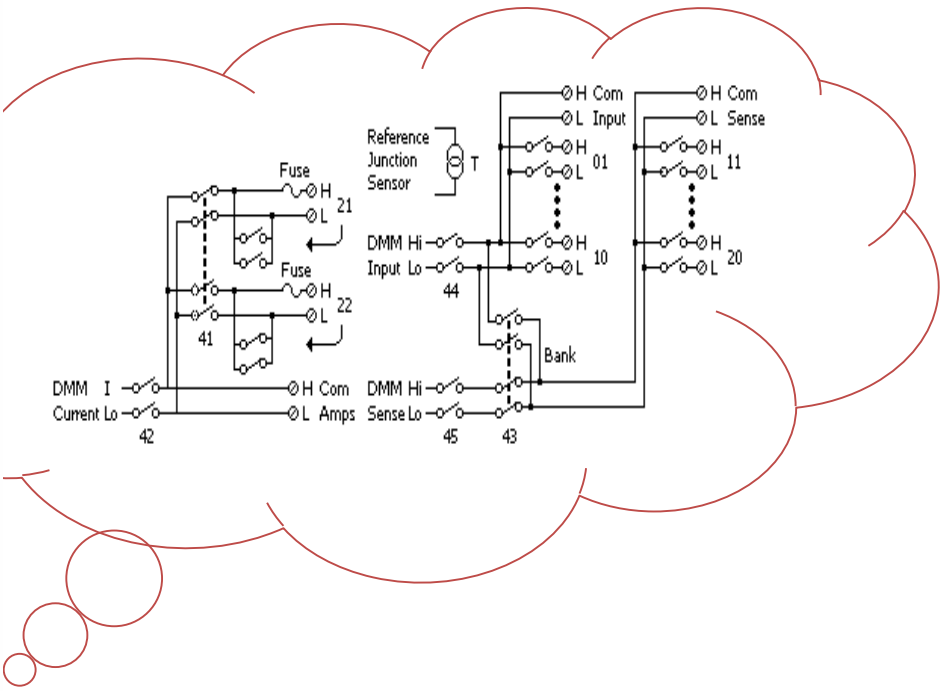
DAQ-900 is a solid state relay module that provides two groups (A/B) of 10 2-wire channels each. All 20 channels are switchable to high (HI) and low (LO) inputs, providing fully isolated inputs for the built-in digital meter or external instruments. During 4-wire resistance measurements, the channels of group A are automatically paired with the channels of group B to provide power and sense connections. The module has a built-in cold junction reference, which can greatly reduce errors caused by thermal gradients when measuring thermocouples

DAQ-901

20+2 Channels Universal Multiplexer (Armature Relay)

※ The scanning speed can reach 80 channels per second
※ 2-wire and 4-wire scanning
※ Built-in temperature cold junction reference
※ 300 V switching
※ The extra 2 channels can directly measure the current (1 A/each channel)





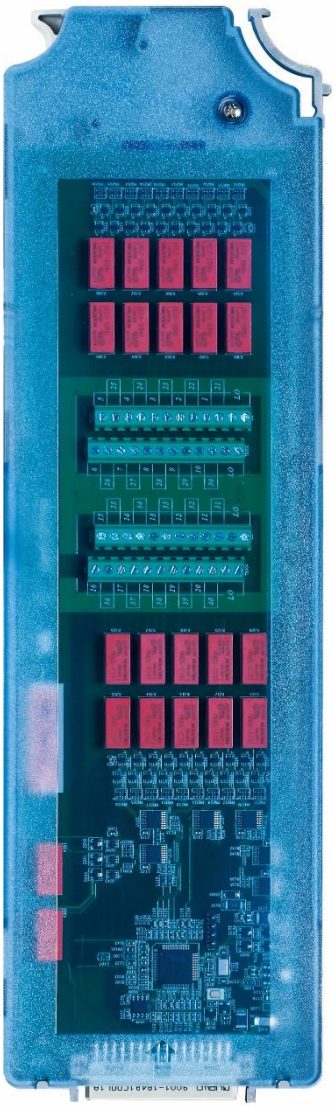
DAQ-901 is a comprehensive multiplexer for general scanning. The same module can mix 2-wire and 4-wire channels; at the same time, the additional 2 current input channels can be used for AC and DC current measurement without external shunt resistors (maximum 1 A per channel).

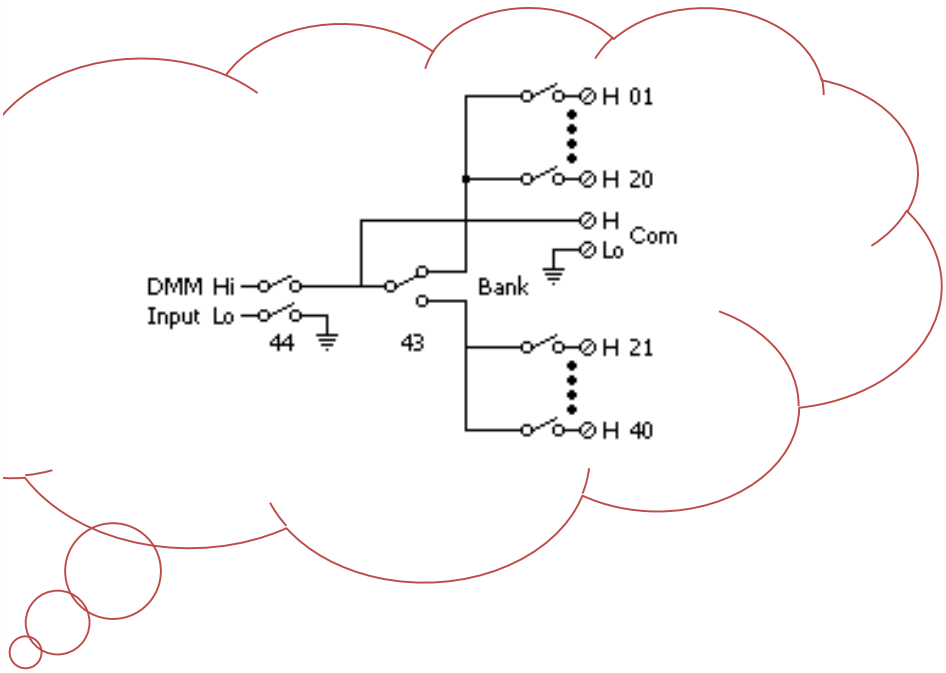
DAQ-901, a total of 22 channels, intensive multi-function switching and a scan rate of up to 80 channels per second, is suitable for various data acquisition applications.

DAQ-903

40-Channel Single-Ended Multiplexer

※ The scanning speed can reach 80 channels per second
※ Single-wire switching is suitable for common-low applications
※ 2-wire scanning (except current)





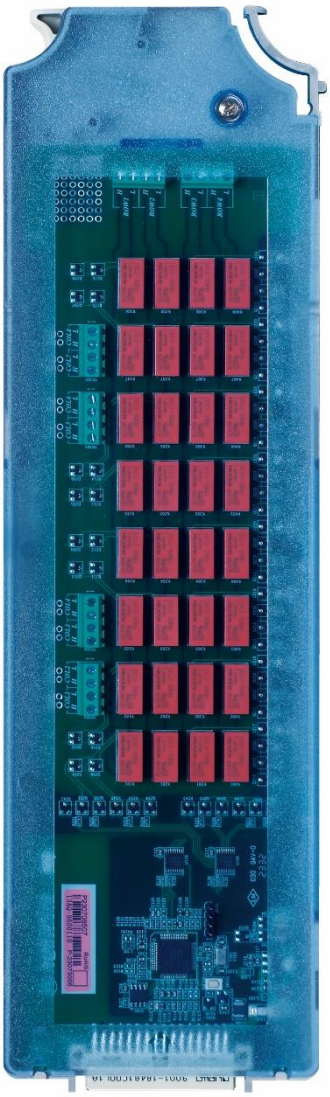
DAQ-903 can switch 40 single-wire inputs per module. It can be used for common-low applications such as battery testing, component characterization and desktop testing. The low-voltage connection is isolated from ground and can be floated up to 300 V.

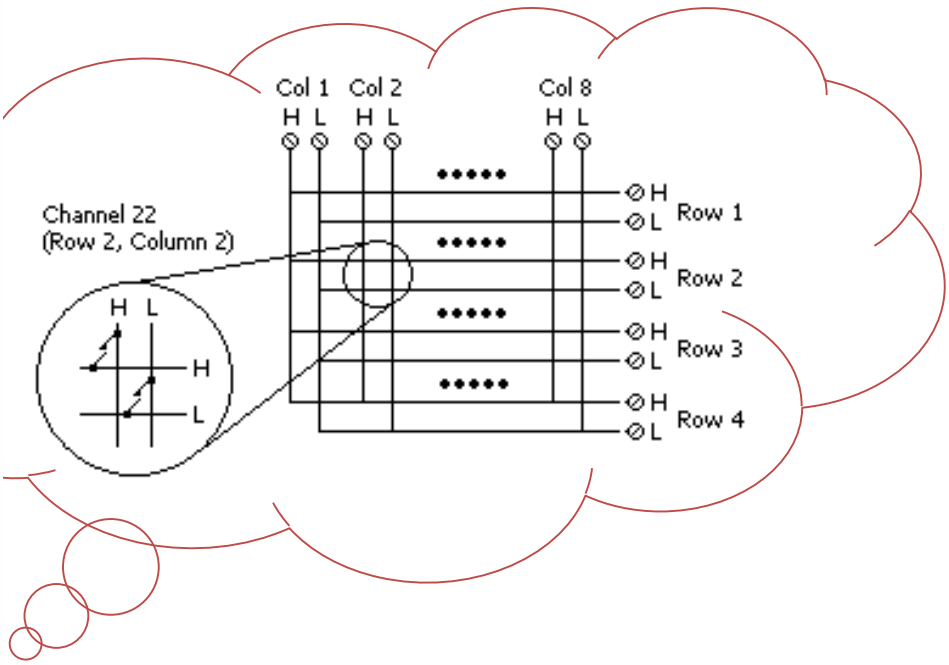
DAQ-903 also supports all 2-wire internal measurements except current.

DAQ-904

4 x 8 2-Wire Matrix

※ The switching speed 3ms
※ 32 2-wire intersections
※ 300 V, 1 A switching
※ Up to 96 crosspoints (3 slots)





DAQ-904 module can provide the most flexible connection path between your DUT and the test system, allowing different test instruments to be connected to multiple points on the DUT at the same time.

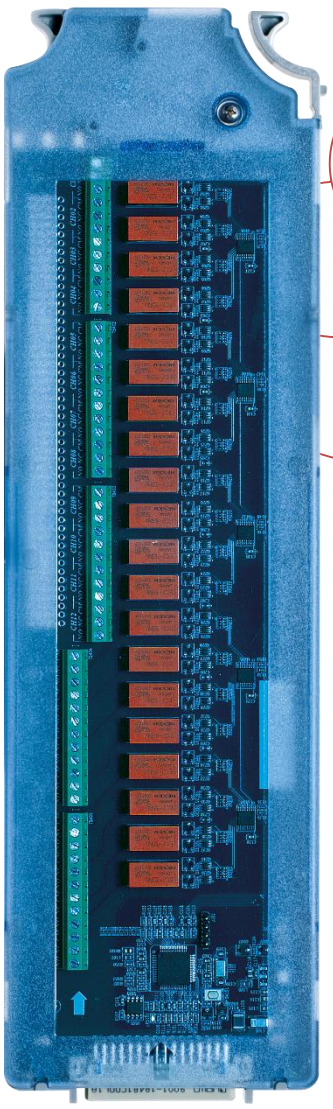
DAQ-904 can connect the rows and columns of multiple modules to build larger matrices, such as 8 x 8, 4 x 16...etc. Up to 96 crosspoints can be built in a single instrument.

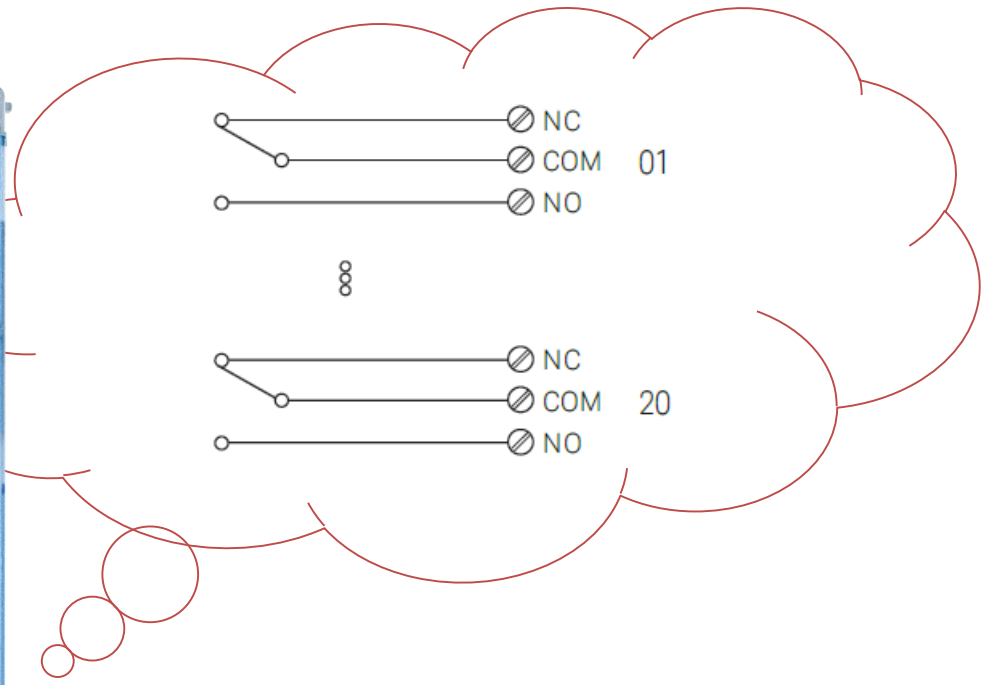
NEW

DAQ-908

20 Channels Actuator/General Purpose Switch

※ SPDT (Form C) latching relays
※ 300 V, current 1 A actuation and control



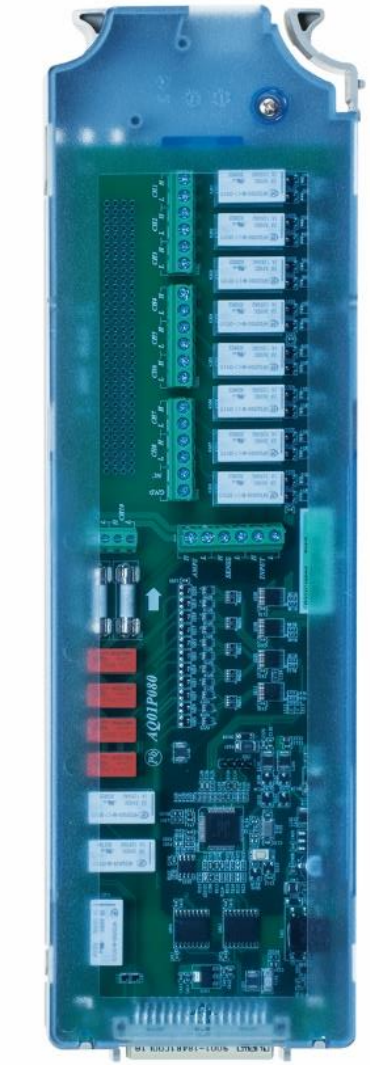


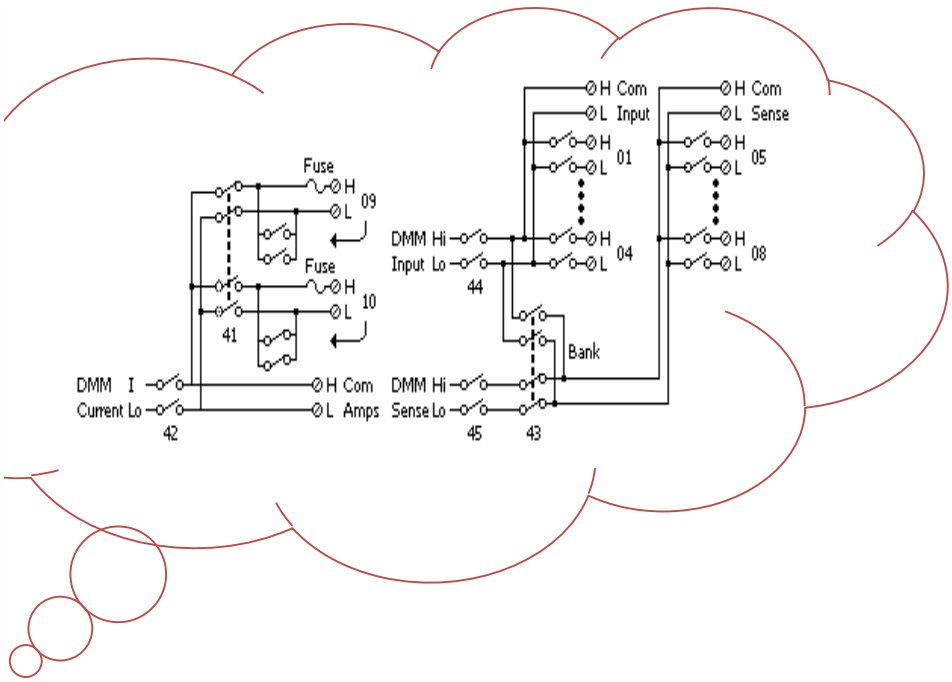
DAQ-908, a general purpose switch module with 20 independent single pole double throw (SPDT) relays, can be used for power cycling in DUTs, control indicator lights and status lights. DAQ-908 can also activate external power relays and solenoid valves. While combining DAQ-908 with matrix and multiplexer modules, switching systems can be customized. 300 V and 1 A contact can handle up to 50 W, which is sufficient for multiple powerline switching applications.

DAQ-909

8+2 Channels High Voltage High Current Multiplexer

※ The scanning speed reaches 60 channels per second
※ DC voltage 600 V, current 2 A
※ 2-wire and 4-wire scanning
※ Additional 2 channels can directly measure current (2 A/each channel)





DAQ-909 is a multiplexer specially designed for high voltage, providing 8 channels for DC 600 V / AC 400 Vrms voltage measurement. The additional 2 current input channels can be used for AC and DC current measurement, external shunt resistors are not required (maximum 2 A / per channel).

Modules Characteristics

A single mainframe can insert up to three modules (in any combinations).
The built-in digital multimeters of DAQ-9600, except DAQ-904 and DAQ-908, can be connected and used via DAQ-900, DAQ-901, DAQ-903 and DAQ-909 multiplexers.

1. For the measurement of 100 Ω and 1 kΩ resistance ranges, it is recommended to use 4-wire resistance. The maximum resistance range of DAQ-900 is 1 MΩ.
2. When measuring AC voltage, the input impedance will decrease with frequency. A source impedance of 5 Ω or less will maintain specification over frequency. A source impedance of 50 Ω or less will maintain specification in the 5 kHz range.
3. For DC voltage measurement, if the integration time is short and the source impedance is high, more stabilization time may be required.
4. The module has an armature backplane and 2-wire/4-wire relays with a life of 100 M cycles (unlimited life cycle within FET Bank)
5. Need to use an extension cable moving the cold junction outside the chassis and manually set the reference temperature value.
